Designing for users with dyslexia.

Allow the user to customise their view for their preferences such as colours, fonts and text size.

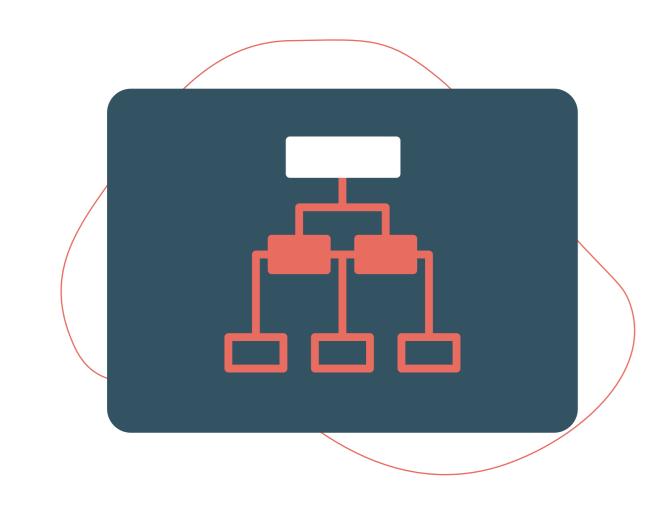

Use sans-serif fonts at a minimum of 16 px so it's easier to read.

Reinforce text with icons or visual queues so a reader can scan a page without reading all the text.

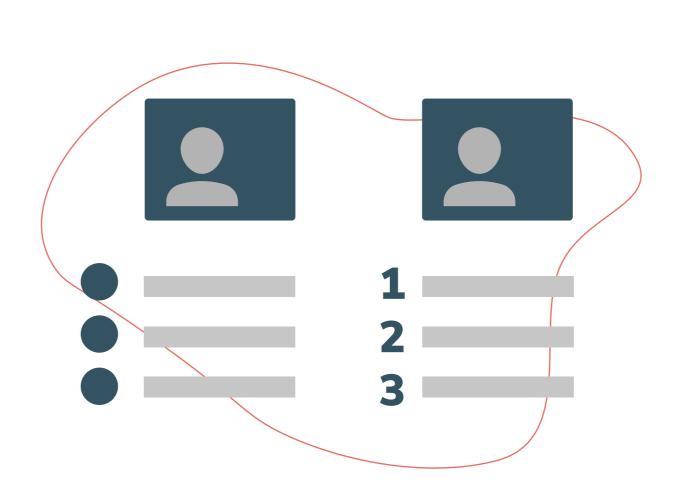

Keep your navigation clear and logical and make the home button always easily accessible.

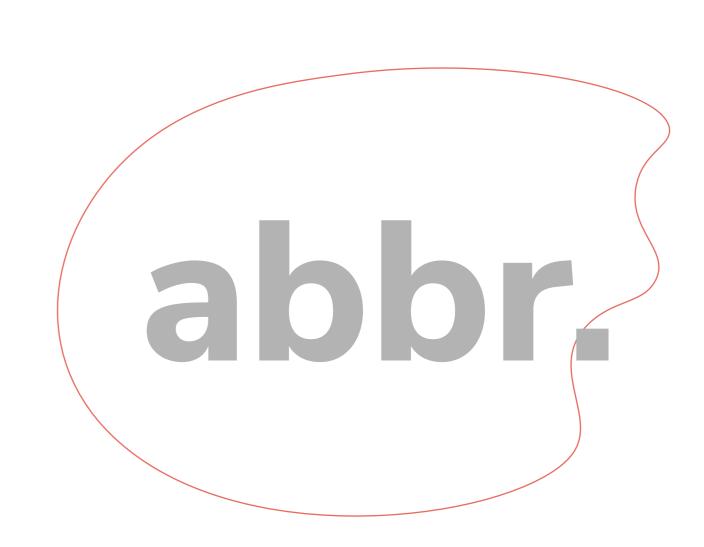

Provide a site map to allow users to view all options and choose where they want to go next.

Make your content clear and concise. Use short sentences and text areas. Maximum line length should be 80 characters.

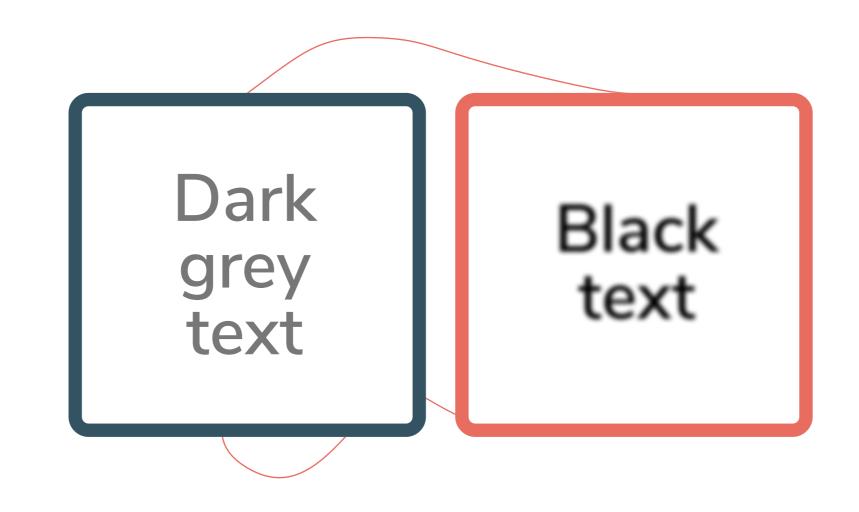

Provide information in numbered or bulleted lists as these are more predictable and easily digestible.

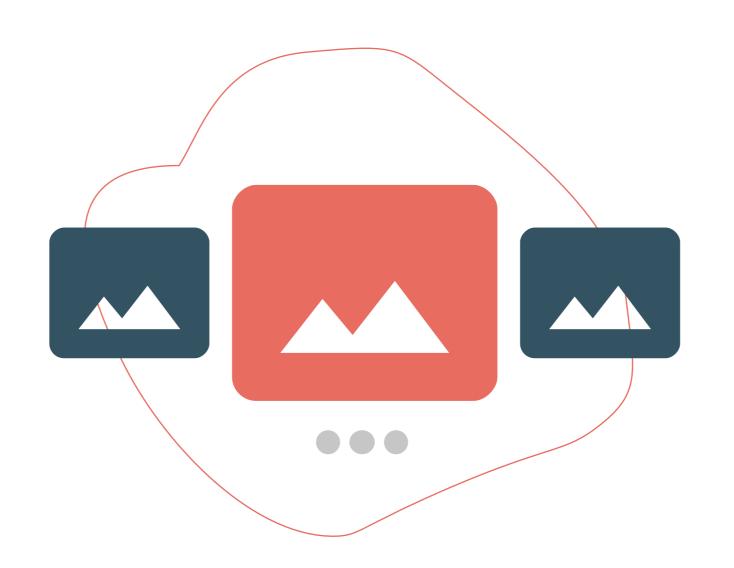

Avoid abbreviations where possible and always provide the expanded form when first used.

Avoid italics and underlines. Use bold text for emphasis instead.

User dark grey text on a white background instead of black (which can cause a blurred effect).

Avoid carousels and rotating text. Give users an opportunity to read and digest information at their own pace.

If you provide a search bar, ensure that it is equipped to handle misspellings.
